**Aksjologia: Toruńska logika i aksjologia lat 1946-1950 po pół wieku**

**Axiologic: the Toruń logic and axiology of 1946-1950 after half a century**

SUMMARY

The topic of article is linked to lectures given at the Toruń University in the years 1946-50. Seemingly dealing with two separate fields, axiology and logic, over the years the lectures gradually began to show the two disciplines to be related. The relationship had to do with the question of how think and of how to pass evaluative judgements, or in other words how to evaluate both our goals and the means that lead to their achievement. Apart from that, an axiological – or evaluative – nature could also be ascribed to the discussion of what exists, and what can exist.

Before the author came to such conclusions, the 1946-50 lectures at Toruń University used to be traditional academic courses, of interest to a more or less significant number of freshmen from various faculties. It was only later that the confrontation of the lectures with a great many issues of everyday life gave rise to what could be called axiology.

The professors who gave the lectures, Tadeusz Czeżowski and Henryk Elzenberg, are no longer alive, but during their lectures and seminars they both suggested a number of solutions concerning the basic issues in with the relationship between the two disciplines became evident, and they also gave specific examples of reasoning. The author attempts to elaborate on some of the main elements relating to the theory and practice of the common ground between axiology and logic.
